

Integrated Pest Management

Environmental Pest Control specializes in Integrated Pest Management (IPM).

IPM is the most advanced pest management program available today. Our service approach utilizes preventive and corrective pest management strategies. IPM programs are excellent methods for resolving pest concerns.

- Hospitality
- Golf Courses
- Foodservice
- Health Care
- Military
- Manufacturing
- Schools
- Property Management
- Retail & Small Business

6-Step Protection Plan

1. Inspection

Thorough inspections are conducted to identify pests that may be present in your facility. Visual inspections of interior and exterior conditions provide valuable information of pest infestations and possible control strategies.

2. Monitoring

Monitors are strategically placed in the facility to identify areas of pest activity. Log Books keep a running record of pest sightings. This monitoring component is an integral part of our recurring service.

3. Pest Identification

Pests come in different shapes and sizes. Treatments and solutions vary depending of the pest and their characteristics. EPC's experienced staff will identify pests and their patterns.

4. Custom Tailored Program

Our wealth of experience in IPM gives our programs an advantage. Our IPM programs are customized to monitor and solve problems with the changing seasons and pest patterns. Each program is designed specifically for your facility. **We know and understand pests best.** This knowledge and experience reduces time spent implementing our programs, making us very efficient and reduces costs. We are leaders in the pest control industry.

5. Managed Product Use

The goal of IPM is to develop a comprehensive system of handling pest management issues without total reliance on pesticide products. Baiting, trapping and exclusion techniques are used extensively to minimize the use of pesticide applications in the facility. Proper sanitation will help maximize the effectiveness of our services. As with any partnership, your cooperation and participation are valued and appreciated.

6. Record Keeping

It is important to establish an effective reporting system as part of IPM. Environmental Pest Control will provide you with a Pest control log book, label binder and detailed billing.
